

$$y = (3x^2 + 5)^4$$

$$\Rightarrow y' = 3(3x^2 + 5)^3 \cdot (6x)$$

$$y' = 24x(3x^2 + 5)^3$$

$$x = \sin(x^2)$$

$$\Rightarrow \cos(x^2) \cdot 2x$$

$$x' = 2x(\cos(x^2))$$
