

Class.	[0-10[	[10-20[	[20-30[	[30-40[	[40-50[
n_i	5	8	12	15	10
x_i	5	15	25	35	45
ICF	5	13	25	40	50

Find Mean, Median and mode.

$$x_i = \frac{L + U}{2} \quad , N = 50$$

$$\text{mean} = \frac{\sum n_i x_i}{N} = \frac{1420}{50} = 28.4$$

$$\text{Median} = L + \left(\frac{\frac{N}{2} - ICF_{H-1}}{n_i} \right) h$$

$$\text{Median} \Rightarrow \frac{N}{2} = 25 \Rightarrow \text{class } [20-30[$$

$$\text{Median} = 20 + \left(\frac{25 - 13}{12} \right) 10 = 30$$

$$\text{Mode} = L + \left(\frac{n_1 - n_0}{2n_1 - n_0 - n_2} \right) h$$

$$\text{Mode} = 30 + \frac{15 - 12}{30 - 12 - 10} = 30 + \frac{3}{8} = 33.75$$
